Salomon QST 106 181cm

Look SPX 12 mounted for 28.5 boot

\$280

With its 106 mm waist width and All-Terrain rocker profile, it's highly versatile among the freeride category. Salomon uses a lightweight poplar wood core that's supported by C/FX and Cork Damplifier. C/FX has been earning our praise since its inception. By combining flax with carbon fiber, Salomon has created a material that provides energy and responsiveness as well as vibration damping and a smooth feel. Although it might not have as pronounced rocker as the Blank and QST 98, there's still a significant amount, especially in the tip. It's a nice shape for a freeride ski as you get the benefits of both edge grip when conditions are on the firm side and playfulness and float when the snow is soft and fluffy. - SkiEssentials.com

- Skied less than 10 days
- Bases just about perfect
- Minimal scratching on top sheet
- Includes cool stickers too
